

DHCP

- * DHCP stands for Dynamic Host Configuration Protocol
- * it is a network protocol
- * it automatically assigns IP address to devices
- * it reduces manual IP configuration

ex:- when your laptop connects to wifi, the router gives it an IP address using

DHCP

CIDR

- * CIDR stands for Classless Inter-Domain Router
- * it is an IP addressing method
- * it defines how IP address and subnet masks are written and divided
- * it helps create efficient subnetworks and reduces IP address waste

ex:- 192.168.1.0/24 is CIDR notation, where /24 means the first 24 bits are the network portion
